We Ship by Parcel Post anywhere in this Country

Now that we have a domestic Parcel Post System (although the zone divisions make it slightly cumbersome), a better regulated express service and more easily understood freight rates, the ordering of seeds by mail has been greatly simplified.

Bulk limit (measurement around package both ways) in all zones 72 inches. Liquids and goods packed in glass should be sent by express.

Seeds, plants, and bulbs can be mailed, the rate of postage being 1c for each 2 ounces on packages weighing up to 8 ounces. Anything over 8 ounces takes the pound rate. That is, a package weighing 9 to 16 ounces takes the rate for one pound, and one weighing 17 to 32 ounces takes the rate for two pounds and so on. Therefore, when you want one pound of seed remit postage for two pounds as packing will increase the weight. There will only be two or three cent discounts in any rate.

The weight limit of a single package to zones 1 and 2 is 50 pounds; to all others, 20 pounds.

We pay postage on all garden seeds in packets, ounces, one-fourth and one-half pounds and pounds. Add 5c per pound postage on grass seeds, seed grain and 6c per pint and 8c per quart for corn, peas, and beans, when wanted by mail.

Archias' New Year's Greeting

1884 33 YEARS OF SUCCESSFUL SEED BUSINESS 1917

To our friends and patrons:

A day or so ago we received a letter from an enterprising man who was trying to sell us some of his goods, and we want to tell you about this letter, because it was very interesting to us and because the story illustrates the question of doubt which so often stands in the way of a man seeing things which are actual facts. This story runs as follows:

An old resident of West Virginia, by the name of Silas Jones, had never seen a railroad train. Some friends drove him thirty miles to a railroad station, arriving just in time to see the New York-Chicago limited load and unload its human cargo. Uncle Silas looked the train over, and said, "Fellers, they'll never start her." Just then the train pulled out and went thundering down the Monongahela valley. Old Silas stood silent, watching the disappearing train. Finally he turned to his friends and said: "Fellers, they'll never stop her."

Please remember that in trading with us you are patronizing the oldest and best established house in this part of the country. We have been in continuous business since 1884 and during that time we have annually served thousands of satisfied customers. We have pleased others and we can please you. We hope to have an order from you this season. Please do not disappoint us.

Wishing one and all a Happy and Prosperous New Year, we remain,

Yours truly,

ARCHIAS’ “SURE SEEDS” ARE TESTED

We have probably the best and most complete system of seed testing and trial grounds to be found anywhere. We pay particular attention to seeds suitable for planting in the central western and southern states. The seeds offered by us are not only good, but will give satisfaction. They are strong in vitality and procured from properly selected, cultivated, and rogued fields and are as good as grow. ARCHIAS’ "SURE SEEDS" have been planted for thirty-three years. ARCHIAS’ "SURE SEEDS" are known to almost everybody who plants seeds. ARCHIAS’ trade mark is on every package and is a guarantee of quality.

SEED WARRANTY—Most of the seeds with seeds are entirely outside of our control and they render it impossible for us to guarantee success, and therefore we want it plain to understand that while we exercise great care to have all seeds, plants, and bulbs, pure and reliable, and also true to name, we do not give any warranty, express or implied, as to description, quality, productiveness or any other matter, of any seeds, bulbs, or plants which we send out, and we will not in any way responsible for the crop. Neither, agent or employee of this company is authorized to make any warranty whatsoever. If this purchaser does not accept the seeds, bulbs, or plants on these conditions notify us at once and we will give instructions for disposition of same, and the money that has been paid for same to us will be promptly refunded. It is to our interest, however, to have everything of the highest quality obtainable, and we would not furnish seeds of doubtful quality for several times the price that we receive for them, as we would injure us more than it would the purchaser. However, we have to much confidence in our seeds that we hereby agree to refund any order for vegetable or flower seeds free of charge should they prove otherwise than as we represent them. We know of no responsible seed firm which guarantees seeds any further than this. Compare with other catalogues and you will find that we are right.

THINGS WORTH READING

SEND MONEY by express, draft, registered letter or post office money order. We accept clean 1 and 2 stamps same as cash.

**Rocky Ford Melon**

The select Rocky Ford Seed which we offer is grown in the Rocky Ford, Colorado district by a grower who raises seed only and who we know does not ship his marketable melons, saving the table seed as do many of the so-called seed growers in that region. This melon is too well known to need much description. The ideal type has a small seed cavity, thick, luscious flesh, high flavor, and can be eaten almost as the ripen. Flesh is green in color except a tinge of yellow at the center. Netting should be heavy. Pkt., 5c; oz., 4c; lb., $1.00.

**New Muskmelon—Burrell's Gem**

It was hard to beat the Rocky Ford, and yet it has been done. The new variety: has salmon flesh of unusual thickness and a flavor that can hardly be surpassed. The flesh is 1 1/2 to 2 inches thick, the rind is heavily netted, slightly ribbed and very thin. The Melons grow to an average size of 6 inches in length and 4 1/2 inches in diameter, and weigh about 2 pounds each.

They are ideal shipping Melons, and notwithstanding the thin rind have stood shipment from Colorado to New York in perfection. The Burrell Gem has brought more money in the open market than any other variety. We recommend this new Melon very highly and encourage very extensive planting. Pkt., 10c; oz., 10c; lb., 75c.

Archias' Celebrated Onion Seed

Cultivation
Onion seed should be sown as soon as possible in the spring, even if the weather is cool, just so the soil works up well. This gives the onion a good start and ahead of weeds and before dry weather sets in. After thoroughly pulverizing the soil, make a trench 4 1/2 inch deep. When 4 inches high thin out to stand 3 to 4 inches apart in rows, keeping them well hoed and free from weeds. Onions delight in rich, deep, sandy loam and succeed well if grown for a succession of years on the same ground. Deep plowing prevents blight.

Not less than one bushel crate sold, as we cannot break crate. Remember, our ear corn is positively no better than shelled corn, and you lose the shankage. It will cost you more freight. However, the expense is also greater to us to select, crate and store corn on the cob. NOTE—Our crates are made solid this season. The corn is carefully wrapped and packed in solid crates, which prevents loss by mice and damage in transit. Our shelled corn is packed in good, new bags, insuring safety in shipping, and should reach you in good order.

**ARCHIAS’ MISSOURI PRIDE**

(Yellow)

A grand, large, medium early, yellow corn of perfect shape, size and color. A wonderful yielder; not quite as early as the Iowa Gold Mine, but larger and more prolific, consequently more profitable.

An all round profitable corn for the farmer, whether grown for market or for feeding. No corn grower will make a mistake in planting Archias’ Missouri Pride. A quick growing yellow variety, highly esteemed by those who have grown it. It usually produces two ears to the stalk. It is one of the seven varieties recognized by the Illinois Experiment Station, where it has been first in yield more times than any other variety. The Improved Leaning has been selected for a richer color—a beautiful brownish yellow—a deeper and somewhat rougher kernel. The ears average about 10 inches long and weigh three-fourths to one pound each. The stalks are of medium height, with many broad leaves, making it one of the best corns of ensilage and fodder. Numerous tests at the experiment station show it high in protein and oil content, making it valuable to the live stock grower and feeder. By mail postpaid, lb., $4.75; 3 lbs., 60c. Mrs. A. Ireland—The large standard is circular and nicely waved; of a very bright rose-pink, with a clear, creamy base. The wings, large and fully expanded, are beautiful in color, but overlaid with rose on the exterior. Pkt., 10c; oz., 25c.

HOW TO MAKE A HOT BED

Select a well-drained spot and make the pile of manure 15 to 18 inches deep; or a foot of soil may be dug out and filled in with manure well tramped down. Place the frame on it. Then put 4 inches of good soil all over the surface. Throw some manure or soil up against the outer boards to hold the heat. Put on the sash and keep tight for three or four days. Keep a thermometer in the bed, and when the temperature falls to 70 degrees seed may be sown with safety. The temperature in a hot bed should not be allowed to go above 70 degrees in the day nor below 50 at night. With a hot bed the amateur can start almost any kind of vegetable or flower seed. By sowing such vegetables as egg plant, pepper, tomatoes, etc., and such flowers as heliotrope, scarlet sage, vinca, verbenas, etc., along in March it is possible to have nice, stocky plants ready to set out as soon as the weather conditions are favorable, insuring early returns from Archias New and a long season for the flowers.

**Archias’ “Ideal” Self Watering Flower Box**

Archias’ “Ideal” Self Watering Flower Box—Designed to meet a long felt want and to overcome many objections to wooden boxes and other types of metal boxes, as well as to meet the requirements of the plant itself.

Archias’ Ideal Flower Box has a double wall. The air space between the outer and inner walls keeps the inner wall cool, the dirt will not dry out and roots become shaded. You can water from either end of the top of the box. A channel runs the entire length of the box in the center. This system makes watering easy, regardless of where the box is. Over-watering plants is as detrimental as not watering enough. The Ideal has a method of drainage which prevents giving the plants an over-supply.

An ideal rose for the greenhouse, and may be propagated year after year from runners. In the open air, in the cold, it turns a soft pink. 

Crimson Rambler—The most popular out-of-door climber of today, a rapid producer of long, heavy canes, reaching a height of ten to twenty feet in a season; rich clusters of bloom form a mass of vivid crimson beauty until late in the season. Perfectly hardy in the most trying climates, being a native of Japan.

Dorothy Perkins—Beautiful, shell-pink, color, which holds for a long time, fading finally to a lovely deep rose; very sweet scented; fully equal to Crimson Rambler in foliage, hardiness, habit of growth and blooming qualities.

Archias Everbearing Strawberries—ARCHIAS PROGRESSIVE

We recommend the Progressive as the best of all fall-bearing varieties to date. The originator of the Progressive, Mr. Harlow Rockhill, of Iowa, considers Progressive the best of the fall-bearers and better than a great many spring-bearing varieties. With us the Progressive is a good grower, resembling Dunlap in habit of growth, and a heavy bearer. The blossoms must be kept pruned off until midsummer, until the plants have a chance to make a few runners. When the plants are 2 years old, they may be pruned off, and plants for the fruiting beds. This must be done at least once a week, as the plants are so prolific. The profuse blossoms; that, if left over a week, will be loaded down with young fruit. We have picked hundreds of pounds and with time, and fifty blossoms and green berries from one plant; and it is no uncommon thing to see blossoms, of even ripe berries, of the runner plants which have not yet rooted. The berries are simply delicious in quality, and the fact that they come when other strawberries have done, makes the quality seem even better. The berries part readily from the cap, and it kept picked closely are firm enough for distant shipment.

Price of Archias Progressive Everbearing Strawberries, 12 for 40c; 25 for 65c; 50 for $1.00; 100 for $1.75; postpaid.

If You Have Not Had Successful Fruit Crops—Try Spraying

Trees cannot thrive when infested with the different kinds of sucking, biting, and chewing insects. They cannot produce high grade fruit—nor much of any kind. Systematic spraying will not only increase the quality of your fruit crop but will wonderfully improve the quality as well. Best material and construction of case, the best non-conducting walls, lid and bottom ever put in incubator construction. Not a particle of wood exposed; even the legs are built of heavy metal. The asbestos insulation and the redwood inner case completes the idea. Convenient thermometer holder simplicity of regulator—a single adjusting nut sets the regulator, the set cut outside of incubator, and when once adjusted it stays right and governs the heat to a fraction of one degree. Everything so simple that a child can make big hatches.

The “IDEAL” GRAIN SPROUTER AND SANITARY HOVER

IMPORTANT TO REMEMBER

That quickly sprouted oats make the best of green food for chickens.

That 17 quarts of oats can be sprouted at one time under the International Sanitary Hover. As the International Sanitary Hover will yield in eight days, enough green food to feed laying hens for three days.

That these sprouted oats are far richer in food value than green feed, and eight days doubles the yield of green feed over the yield for the sixth day.

That a few days of hay are a good mixture for hens during the fall and winter months, when the use of Georgian hens can work them the year around as breeders in brooding time, as oat sprouters when laying time, and for the winter.

That oats must be soaked over night in lukewarm water before being used under the Hoover.

That the curtain must positively be left on the hover during the first three days to hold the heat about the oats.

That the sanitary hover, considered merely as an oat sprouter, will pay for itself many times over.

Costs of customers, after breeding for season with the Sanitary Hover, have written to us that they would not sell it at any price if they could not repeat on orders.

Our Price for Ideal Oat Sprouter and Sanitary Hover Combined, $8.50
